

Figure 1: Percentage of ecosystem services (ESs) maintained with increasing & of land assigned as priority area. The level of ESs maintained is relative to the total amount of ES under current land use (2000), meaning that the lines for future land use (scenarios 2040 (A1) and 2040 (B2)) can exceed the 100% ES maintained (see nature-based tourism). The more concave the graph the smaller the fraction of land required to maintain a high % of that particular ES. Vertical dashed lines indicate the top priority levels ranging from 1-25%. Although the prioritization is performed for all ESs combined the results are presented for each ES separately to highlight the differences between the ESs.
