

Figure 1. Distribution of the eight environmental strata together with the location of the 35 dispersed random squares.

Villoslada et al 2016

Table 2. The average proportion of bare ground, litter and moss in different plots, as an indication of available space for colonization of new species.

Plot type	Bare ground	Litter	Moss
Abandoned	0,71	1,04	0,00
Abandoned/LHE/CHE	0,00	15,00	5,00
Clear cut	4,23	5,94	7,33
Field edge	54,76	0,63	0,00
Forest	2,83	6,67	39,53
Invasive	2,58	0,61	0,79
LHE/CHE	0,00	0,00	0,00
Line of trees	4,38	4,74	0,61
Neglected	0,00	0,87	3,45
Roadside	8,71	0,00	0,45
Tall herbs	1,54	0,00	0,33
Water edge	24,78	1,15	1,20
Total	10,22	2,15	6,32
